Foreword xix

Introduction xxv

PART I. IN THE CLASSROOM

Purpose

1. Helping the student 1

2. Questions, recommendations, mental operations 1

3. Generality 2

4. Common sense 3

5. Teacher and student. Imitation and practice 3

Main divisions, main questions

6. Four phases 5

7. Understanding the problem 6

8. Example 7

9. Devising a plan 8

10. Example 10

11. Carrying out the plan 12

12. Example 13
13. Looking back 14
14. Example 16
15. Various approaches 19
16. The teacher's method of questioning 20
17. Good questions and bad questions 22

More examples

18. A problem of construction 23
19. A problem to prove 25
20. A rate problem 29

PART II. HOW TO SOLVE IT

A dialogue 33

PART III. SHORT DICTIONARY OF HEURISTIC

Analogy 37
Auxiliary elements 46
Auxiliary problem 50
Bolzano 57
Bright idea 58
Can you check the result? 59
Can you derive the result differently? 61
Can you use the result? 64
Carrying out 68

Condition 72
Contradictory† 73
Corollary 73
Could you derive something useful from the data? 73
Could you restate the problem?† 75
Decomposing and recombining 75
Definition 85
Descartes 92
Determination, hope, success 93
Diagnosis 94
Did you use all the data? 95
Do you know a related problem? 98
Draw a figure† 99
Examine your guess 99
Figures 103
Generalization 108
Have you seen it before? 110
Here is a problem related to yours and solved before 110
Heuristic 112
Heuristic reasoning 113
If you cannot solve the proposed problem 114
Induction and mathematical induction 114
Inventor's paradox 121
Is it possible to satisfy the condition? 122

Variation of the problem 209
What is the unknown? 214
Why proofs? 215
Wisdom of proverbs 221
Working backwards 225

PART IV. PROBLEMS, HINTS, SOLUTIONS

Problems 234
Hints 238
Solutions 242

HOW TO SOLVE IT

UNDERSTANDING THE PROBLEM

First.

You have to *understand* the problem.

What is the unknown? What are the data? What is the condition? Is it possible to satisfy the condition? Is the condition sufficient to determine the unknown? Or is it insufficient? Or redundant? Or contradictory?

Draw a figure. Introduce suitable notation.

Separate the various parts of the condition. Can you write them down?

DEVISING A PLAN

Second.

Find the connection between the data and the unknown. You may be obliged to consider auxiliary problems if an immediate connection cannot be found. You should obtain eventually a *plan* of the solution.

Have you seen it before? Or have you seen the same problem in a slightly different form?

Do you know a related problem? Do you know a theorem that could be useful?

Look at the unknown! And try to think of a familiar problem having the same or a similar unknown.

Here is a problem related to yours and solved before. Could you use it? Could you use its result? Could you use its method? Should you introduce some auxiliary element in order to make its use possible?

Could you restate the problem? Could you restate it still differently? Go back to definitions.

If you cannot solve the proposed problem try to solve first some related problem. Could you imagine a more accessible related problem? A more general problem? A more special problem? An analogous problem? Could you solve a part of the problem? Keep only a part of the condition, drop the other part; how far is the unknown then determined, how can it vary? Could you derive something useful from the data? Could you think of other data appropriate to determine the unknown? Could you change the unknown or the data, or both if necessary, so that the new unknown and the new data are nearer to each other?

Did you use all the data? Did you use the whole condition? Have you taken into account all essential notions involved in the problem?

CARRYING OUT THE PLAN

Third.
Carry out your plan.

Carrying out your plan of the solution, *check each step*. Can you see clearly that the step is correct? Can you prove that it is correct?

LOOKING BACK

Fourth.
Examine the solution obtained.

Can you *check the result?* Can you check the argument?
Can you derive the result differently? Can you see it at a glance?
Can you use the result, or the method, for some other problem?
