## 2 Scientific Activity

### Publications

I work in algebraic geometry. My main field of expertise is the geometry of algebraic curves and their moduli spaces, but I am interested in higher dimensional projective varieties and their birational geometry as well. I also enjoy doing interdisciplinary research, both application oriented and related to history and philosophy. Accordingly, my about 120 scientific publications split into four research areas:

- Algebraic curves and moduli spaces
- Projective and birational geometry
- Applications of algebra and geometry
- History and philosophy of mathematics.
